Syllabus for SCI 5200

Instructor and Contact Information

Instructor: Melissa Danforth (pronouns: she/her)

Office Hours: MTuWThF 12:00-1:00pm via Discord (link posted on Moodle) or by appointment

Email: mdanforth@csub.edu

Virtual Class Information

This class uses a mix of pre-recorded videos and resources for the modules and weekly Zoom sessions (aka, this is a hybrid asynchronous and synchronous virtual course). The modules and link to the Zoom session are posted on Moodle.

The Zoom session meets on Mondays from 4:00-5:00pm Pacific Daylight Time from Monday March 21st to Monday May 16th. There is no Zoom meeting on Monday April 11th, as that is Spring Break week. The general topics of discussion at each Zoom session will be:

Date	Topics
March 21st	Overview of the course and Updates to Modules 0 through 2.
March 28th	Walking through Checkpoint Assignments 1 and 2, which are tied to Modules 3 and 4.
April 4th	Walking through Checkpoint Assignments 3 and 4, which are tied to Modules 5 and 6.
April 11th	NO ZOOM MEETING - Spring Break week.
April 18th	Walking through Checkpoint Assignment 5, which is tied to Module 7, and the overall requirements for the Foundational Knowledge capstone assignment (Module 9).
April 25th	Code-along session to get setup and started with Scratch.
May 2nd	Additional Scratch code-along session with intermediate Scratch features.
May 9th	Walking through the requirements for the Lesson Plan (Module 16) and Block Programming (Module 25) capstone assignments.
May 16th	This session is set aside for you to ask questions of me to get your assignments completed by the cut-off date. This session will NOT be recorded, so please make sure to attend or to contact me via Discord/email if you have any questions about completing your assignments.

Attendance during Zoom sessions is optional, but strongly encouraged so you can ask questions. Webcams are not required during Zoom sessions. I have also configured Zoom to allow phone call-ins and to mask phone numbers for those who have to call in to attend.

Recordings from the Monday Zoom sessions will be transferred over to Knowmia for post-processing and closed captioning before being posted to Moodle. This means there is a processing delay for the automatic video transfer between Zoom and Knowmia, and then for the manual closed captioning generation on Knowmia. Please allow 2 business days for the videos to be processed and posted.

General closed-captioning note: The closed captioning is generated by Knowmia's automatic captioning algorithm. I have edited some of the closed-captioning for the module videos to remove errors and clarify wording, but I did not have time to edit all of them. Also, I will not have time to edit the generated captions for the Zoom recordings. Please bear that in mind when watching the videos, but feel free to let me know if there's something very glaringly wrong about the captioning that I should fix.

The video transferred to Knowmia records the active speaker and shared screen from Zoom. This means the recording will capture anything that is said over a microphone (and your webcam if you have it on), but it will NOT have the public chat log or the Zoom names associated with your mic/webcam feed. If you do not wish to appear in the recording, you can either public chat or private chat questions to me for me to answer during class. I'll anonymously repeat any chat questions before answering them.

Catalog Description

SCI 5200 Computational Thinking (3)

A graduate level course offered in an online format that satisfies the Computational Thinking requirement for an Introductory Supplementary Authorization in Computer Science. Topics include solving problems and designing systems using fundamental computing concepts such as decomposition, data representation, generalization/abstraction and algorithms. Students will learn effective computational thinking and programming techniques for the classroom through study of historically significant works, conducting literature search in methods/case studies, and critical discussion in seminar setting.

Prerequisites

Admission to the M.A. in Education - Curriculum and Instruction program or to the Introductory Computer Science Supplementary Authorization (CSSA) program.

Units and Contact Time

3 units lecture. 8 week virtual format with a mix of pre-recorded videos and weekly Zoom sessions. Self-paced. Plan to spend about 6-8 hours per week on videos, reading assignments, quizzes, and course assignments to complete the course.

<u>Type</u>

Satisfies the Computational Thinking requirement of the California Introductory CSSA.

General Course Notes

This course is organized into an Introductory area, then three main sections: (1) Foundational Knowledge in Computational Thinking, (2) Sample Lesson Plans for Computational Thinking, and (3) Block Programming with Scratch. Each section has a capstone assignment that will be used to assess your learning in that section.

Individual modules within each section generally contain four parts: (1) the learning objectives for that module, (2) required reading assignments, (3) optional resources that go further in-depth on the topic, and (4) my slides and video about the module. Some modules are on the honor system, where you check-off Moodle's completion box to indicate that you have completed the module. Some modules have an assessment quiz and/or assignment to gauge your learning. Assessment quizzes allow unlimited attempts, and the highest score is retained in the gradebook.

You will begin the course with modules in the Introductory area. As you mark modules as complete and get at least a 60% grade on the assessment guizzes, additional modules will be unlocked.

Collaborative and exploratory learning is encouraged in this course, with the below Academic Integrity note about turning in one's own work in one's own words. For most of these assignments, I am looking for an expression of creativity and critical thinking, which is a very individualized process, rather than one "correct" answer. It is exceedingly rare in computer science and computational thinking for there to only be one answer. Usually there are many different answers with different strengths and weaknesses, all of which are "correct" (i.e. they all solve the problem at hand). Please keep that in mind while you work on the assignments and discuss them with others in the course.

Class Principles

The following principles will guide this course:

- Communication: I fully understand if something unexpected has come up that interferes with your course work. Please communicate with me as soon as possible though, so we can discuss your options for moving forward in the course. Likewise, if something comes up with my situation, I will use the Moodle Announcement forum and Discord channels to keep you informed. It's important to keep the lines of communication open.
- Respect: There are many situations where differing, but equally valid, opinions and/or solutions may exist. Respect the rights of others to form different conclusions than your own. This includes engaging in respectful and professional discourse in the discussion forums.
- Critical Thinking: Most of the assignments in this course will require applying critical thinking and analysis skills. My grading approach for
 those "thinking questions" is more about seeing your thought process than seeking "perfect" answers. There are many possible and
 equally valid solutions to most computing problems, so it is far more important to explain your thought process for choosing your
 solution, rather than coming up with a "perfect" solution.

Required Textbook(s)

- Foundational Knowledge section: "Computational Thinking: A Beginner's Guide to Problem Solving and Programming" by Karl Beecher. BCS Learning & Development, 2017. ISBN 978-1-78017-36-41.
- Block Programming section: "Computer Science in K-12: An A to Z Handbook on Teaching Programming" edited by Shuchi Grover. Edfinity, 2020. ISBN 978-1-7346627-0-2.

Recommended Textbook(s) and Other Supplementary Materials

Section	Modules			
	Module 0 - Demystifying Computer Science			
Introduction	Module 1 - History of Computer Science			
	Module 2 - Overview of Computational Thinking			
	Module 3 - Algorithmic Thinking			
	Module 4 - Decomposition			
	Module 5 - Pattern Recognition and Generalization			
Foundational Knowledge	Module 6 - Abstraction and Modeling			
	Module 7 - Evaluation			
	Module 8 - Cybersecurity Concepts for Algorithms and Program Design (optional)			
	Module 9 - Foundational Knowledge Capstone			
	Module 10 - "Do's" and "Don'ts" of Teaching CS and Computational Thinking			
	Module 11 - Plans for Algorithmic Thinking			
	Module 12 - Plans for Decomposition			
Sample Lesson Plans	Module 13 - Plans for Pattern Recognition and Generalization			
	Module 14 - Plans for Abstraction and Modeling			
	Module 15 - Plans for Evaluation			
	Module 16 - Lesson Plan Capstone			
	Module 17 - Block Programming Overview			
	Module 18 - Basic Concepts for Scratch Programming			
	Module 19 - Flow Control in Scratch			
	Module 20 - Graphical and Audio Elements in Scratch			
Block Programming	Module 21 - Scripts and Subroutines in Scratch			
	Module 22 - Scratch Programming Project			
	Module 23 - Tips for Teaching Scratch			
	Module 24 - Block Programming Capstone			

Mapping to California K-12 Computer Science Standards

Grade	Foundational Knowledge &	Block Programming section	
Level	Sample Lesson Plans sections	Block Programming Section	
K-2	K-2.AP.10 – Algorithms for tasks K-2.AP.11 – Model how data is stored (variables) K-2.AP.13 – Decomposition K-2.AP.14 – Develop plan K-2.AP.16 – Debug algorithm / program	K-2.AP.12 – Create program w/ loops K-2.AP.14 – Develop plan for program K-2.AP.16 – Debug algorithm / program K-2.AP.17 – Describe programming steps / choices	
3-5	3-5.AP.10 – Compare / refine algorithms 3-5.AP.13 – Decomposition 3-5.AP.17 – Test / debug algorithm / program 3-5.AP.19 – Describe choices made	3-5.AP.11 – Create program w/ data (variables) 3-5.AP.12 – Create program w/ loops, events, conditions 3-5.AP.15 – Plan program w/ input from others 3-5.AP.17 – Test / debug algorithm / program 3-5.AP.18 – Peer programming / collaboration 3-5.AP.19 – Describe choices made 3-5.IC.21 – Accessibility concerns for technology	
6-8	6-8.AP.10 – Flowcharts and pseudocode 6-8.AP.13 – Decomposition 6-8.AP.15 – Incorporate diverse perspectives / societal need 6-8.AP.17 – Systematically test w/ test cases 6-8.AP.18 – Work collaboratively 6-8.NI.5 – Explain potential security threats (optional module on cybersecurity)	6-8.DA.9 – Test / analyze effects of changing variables 6-8.AP.11 – Create clearly named variables w/ operators 6-8.AP.12 – Create program w/ compound flow control 6-8.AP.14 – Create procedures w/ parameters 6-8.AP.15 – Incorporate diverse perspectives / societal need 6-8.AP.17 – Systematically test w/ test cases 6-8.AP.18 – Work collaboratively 6-8.IC.21 – Issues of bias and accessibility in design 6-8.IC.22 – Collaborate w/ many contributors	
9-12	9-12.CS.1 – Abstraction 9-12.DA.11 – Refine computational models 9-12.AP.12 – Design algorithms 9-12.AP.13 – Create generalized solutions 9-12.AP.16 – Decomposition 9-12.AP.20 – Evaluate artifact & refine 9-12.AP.22 – Document and justify decisions 9-12.IC.25 – Application of algorithm to different disciplines	9-12.AP.14 – Justify using specific control structures 9-12.AP.15 – Design project for practical use, personal use, or to address societal issue 9-12.AP.17 – Use modular design 9-12.AP.18 – Design for broad audience w/ user feedback 9-12.AP.21 – Team programming and collaboration 9-12.AP.22 – Document and justify decisions 9-12.IC.24 – Impacts of bias / equity deficits on design	

Academic Integrity Policy

You may discuss the assignments with others in the class, such as on the CSSA Discord channel or on the Moodle discussion forums. However, all assignments in this course are individual assignments. For individual assignments, each student must turn in their own work in their own words; no direct copying from any source or each other is allowed.

For example, you cannot copy-and-paste from a website or copy another student's submission, but you can refer to that website and summarize what you've learned, or summarize your discussion with the other student. I even encourage you to add questions you still have and I'll customize my grading comments to answer those questions, as long as you submit your initial assignment before the feedback deadlines given below.

In particular, everyone should be coming up with their own solutions for the capstone assignments. Even if you've chosen a similar topic or lesson plan, your solution should be unique to you, because you will be bringing you own unique experiences and perspectives to the problem. If I see a similar structure between multiple students' submissions, I will return those for revision, with a more in-depth discussion about bringing your own creativity to the process.

Refer to the Academic Integrity policy in the campus catalog and class schedule for more details. You can also refer to the Academic Integrity policy at the Dean of Students Office at https://www.csub.edu/osrr/

Academic Accommodations

To request academic accommodations, please contact the Office of Services for Students with Disabilities (SSD) and email me an accommodations letter from the SSD Office. Policies from the SSD Office relating to accommodations, such as scheduling policies for using their testing center, must also be followed. For more information about the services and policies of the SSD Office, contact their staff by email and/or visit their website at https://www.csub.edu/ssd/

Grading Categories

Category	Weight
Discussion participation	5%
Scratch programming project	5%
Assessment quizzes	10%
Checkpoint assignments	20%
Foundational knowledge capstone	20%
Lesson plan capstone	20%
Block programming capstone	20%

Moodle will show your "grade to date", where unsubmitted and/or ungraded assignments will not count against your grade, until May 13, 2022.

On May 13, 2022, Moodle will be reconfigured to count unsubmitted/ungraded assignments as a 0 grade, so you know what you need to submit before the end of the term.

Deadlines

There are no late penalties in this course, since this course is self-paced. Each quiz and assignment has been programmed with a recommended due date to help you keep on-track, but there is no penalty if you submit the assignment or complete the quiz after the due date and before the cut-off date.

There are the following deadlines for feedback and cut-off dates:

- Friday April 29th: This is the deadline for feedback on the checkpoint assignments, which build you up to the report for Module 9. You must turn the checkpoint assignments in by 11:59pm on Friday April 29th to receive feedback prior to submitting Module 9. Checkpoint assignments submitted after this date are not guaranteed to be graded prior to the below capstone assignment deadline.
- Monday May 9th: This is the deadline for feedback on the three capstone assignments. Capstone assignments submitted by 11:59pm on Monday May 9th will be graded prior to the cut-off date. Assignments submitted by this deadline will have the option to revise and resubmit prior to May 20th for regrading if you wish to improve your grade.
- Friday May 20th: This is the cut-off date for all submissions. All assignments must be turned in by 11:59pm on May 20, 2022 so I have sufficient time to grade assignments for all of my Spring courses before grades are due on May 25, 2022.

Please keep my workload in mind as well and try to submit your assignments in advance of these dates. Additionally, if something comes up and you cannot complete the assignments by the cut-off date, contact me to discuss an Incomplete grade.

Description of Grading Categories

The grading categories are as follows:

- Discussion Participation: There are discussion boards on Moodle where you will need to create or participate in at least one thread per discussion board for points in this category.
- Scratch Programming Project: You will program a Scratch project of your own choosing for this assignment, to show that you've learned how to program in Scratch. Extending and adapting public Scratch projects is allowed for this assignment (the "Modify" stage of the "Use-Modify-Create" model for computing).
- Assessment Quizzes: The Foundational Knowledge and Block Programming parts of the course have assessment quizzes associated with some modules. You must score a 60% or higher to move on to the next module that has a quiz as a prerequisite. You can also attempt the quizzes as many times as you like and the highest score will be used for your grade.
- Checkpoint Assignments: These assignments are linked to Modules 3 through 7 in the Foundational Knowledge section. They are intended to slowly build you up to complete Module 9 Foundational Knowledge Capstone, by having you work on one section of the capstone report at a time, with plenty of opportunities to get feedback from me for how to improve that section in the capstone report prior to the due date for Module 9.
- Foundational Knowledge Capstone: Module 9 has you create a simple "app" purely on paper (no programming involved) that walks through all of the stages of computational thinking to develop the "app". This is similar to the problem description, project specification, and pseudocode stages of an actual programming project.
- Lesson Plan Capstone: Module 16 has you select one of the lesson plans from the Sample Lesson Plan section and describe how you would use that lesson plan in your classroom. This is the "Use" stage of the "Use-Modify-Create" model for computing.
- Block Programming Capstone: Module 24 has you adapt one of the sample lesson plans (the "Modify" stage of the "Use-Modify-Create" model for computing) for use in your classroom. The lesson plan must teach one aspect of programming using either an unplugged method or Scratch (depending on what you feel is best for your students). You can use a lesson plan from either the Sample Lesson Plan or Block Programming sections as the basis for your submission.
