

Problem

- Parking is a hassle, especially in a highly used lot
- Using CSUB as a use case, it is clear, there is an unsolved problem with parking
- During peak times of day it is nearly impossible to find a spot
- Overall it creates a stressful and unproductive environment

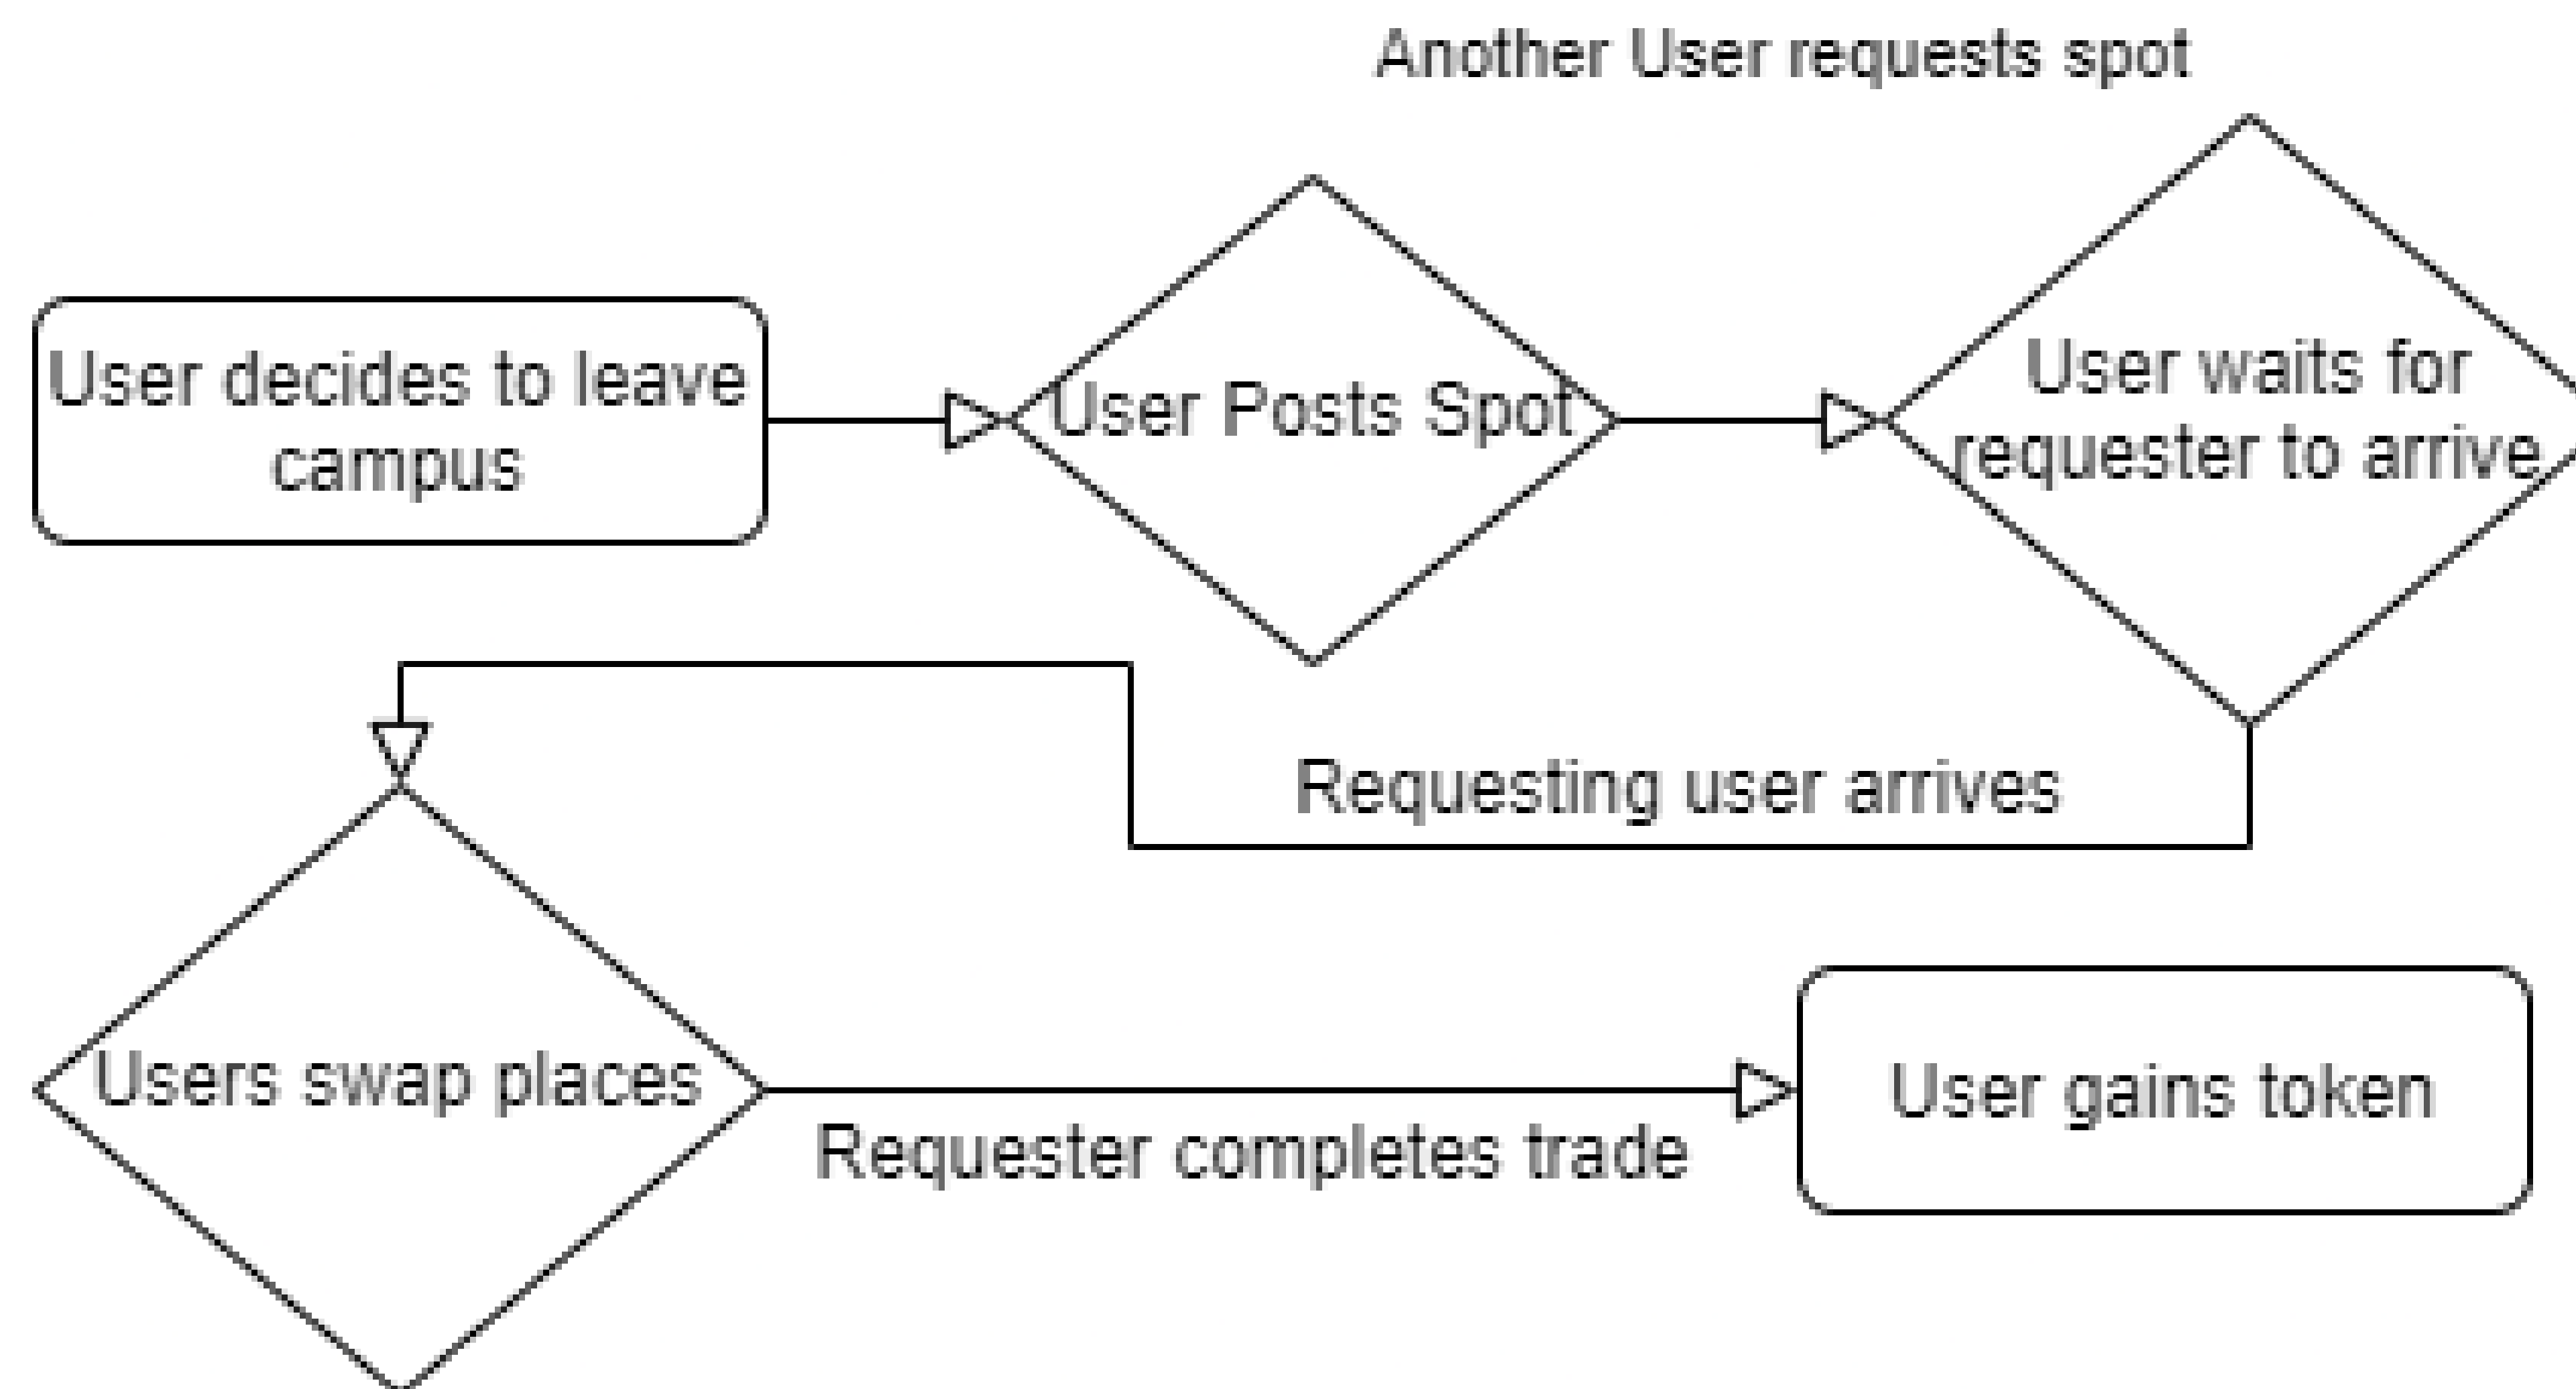

Solution

- ParkInLot – a simple parking solution
- Streamline users' trading of spots by pairing them
- Uses a simple trading algorithm that can be used quickly and efficiently
- Uses a token based system to give users incentive to both request and offer spots for trades

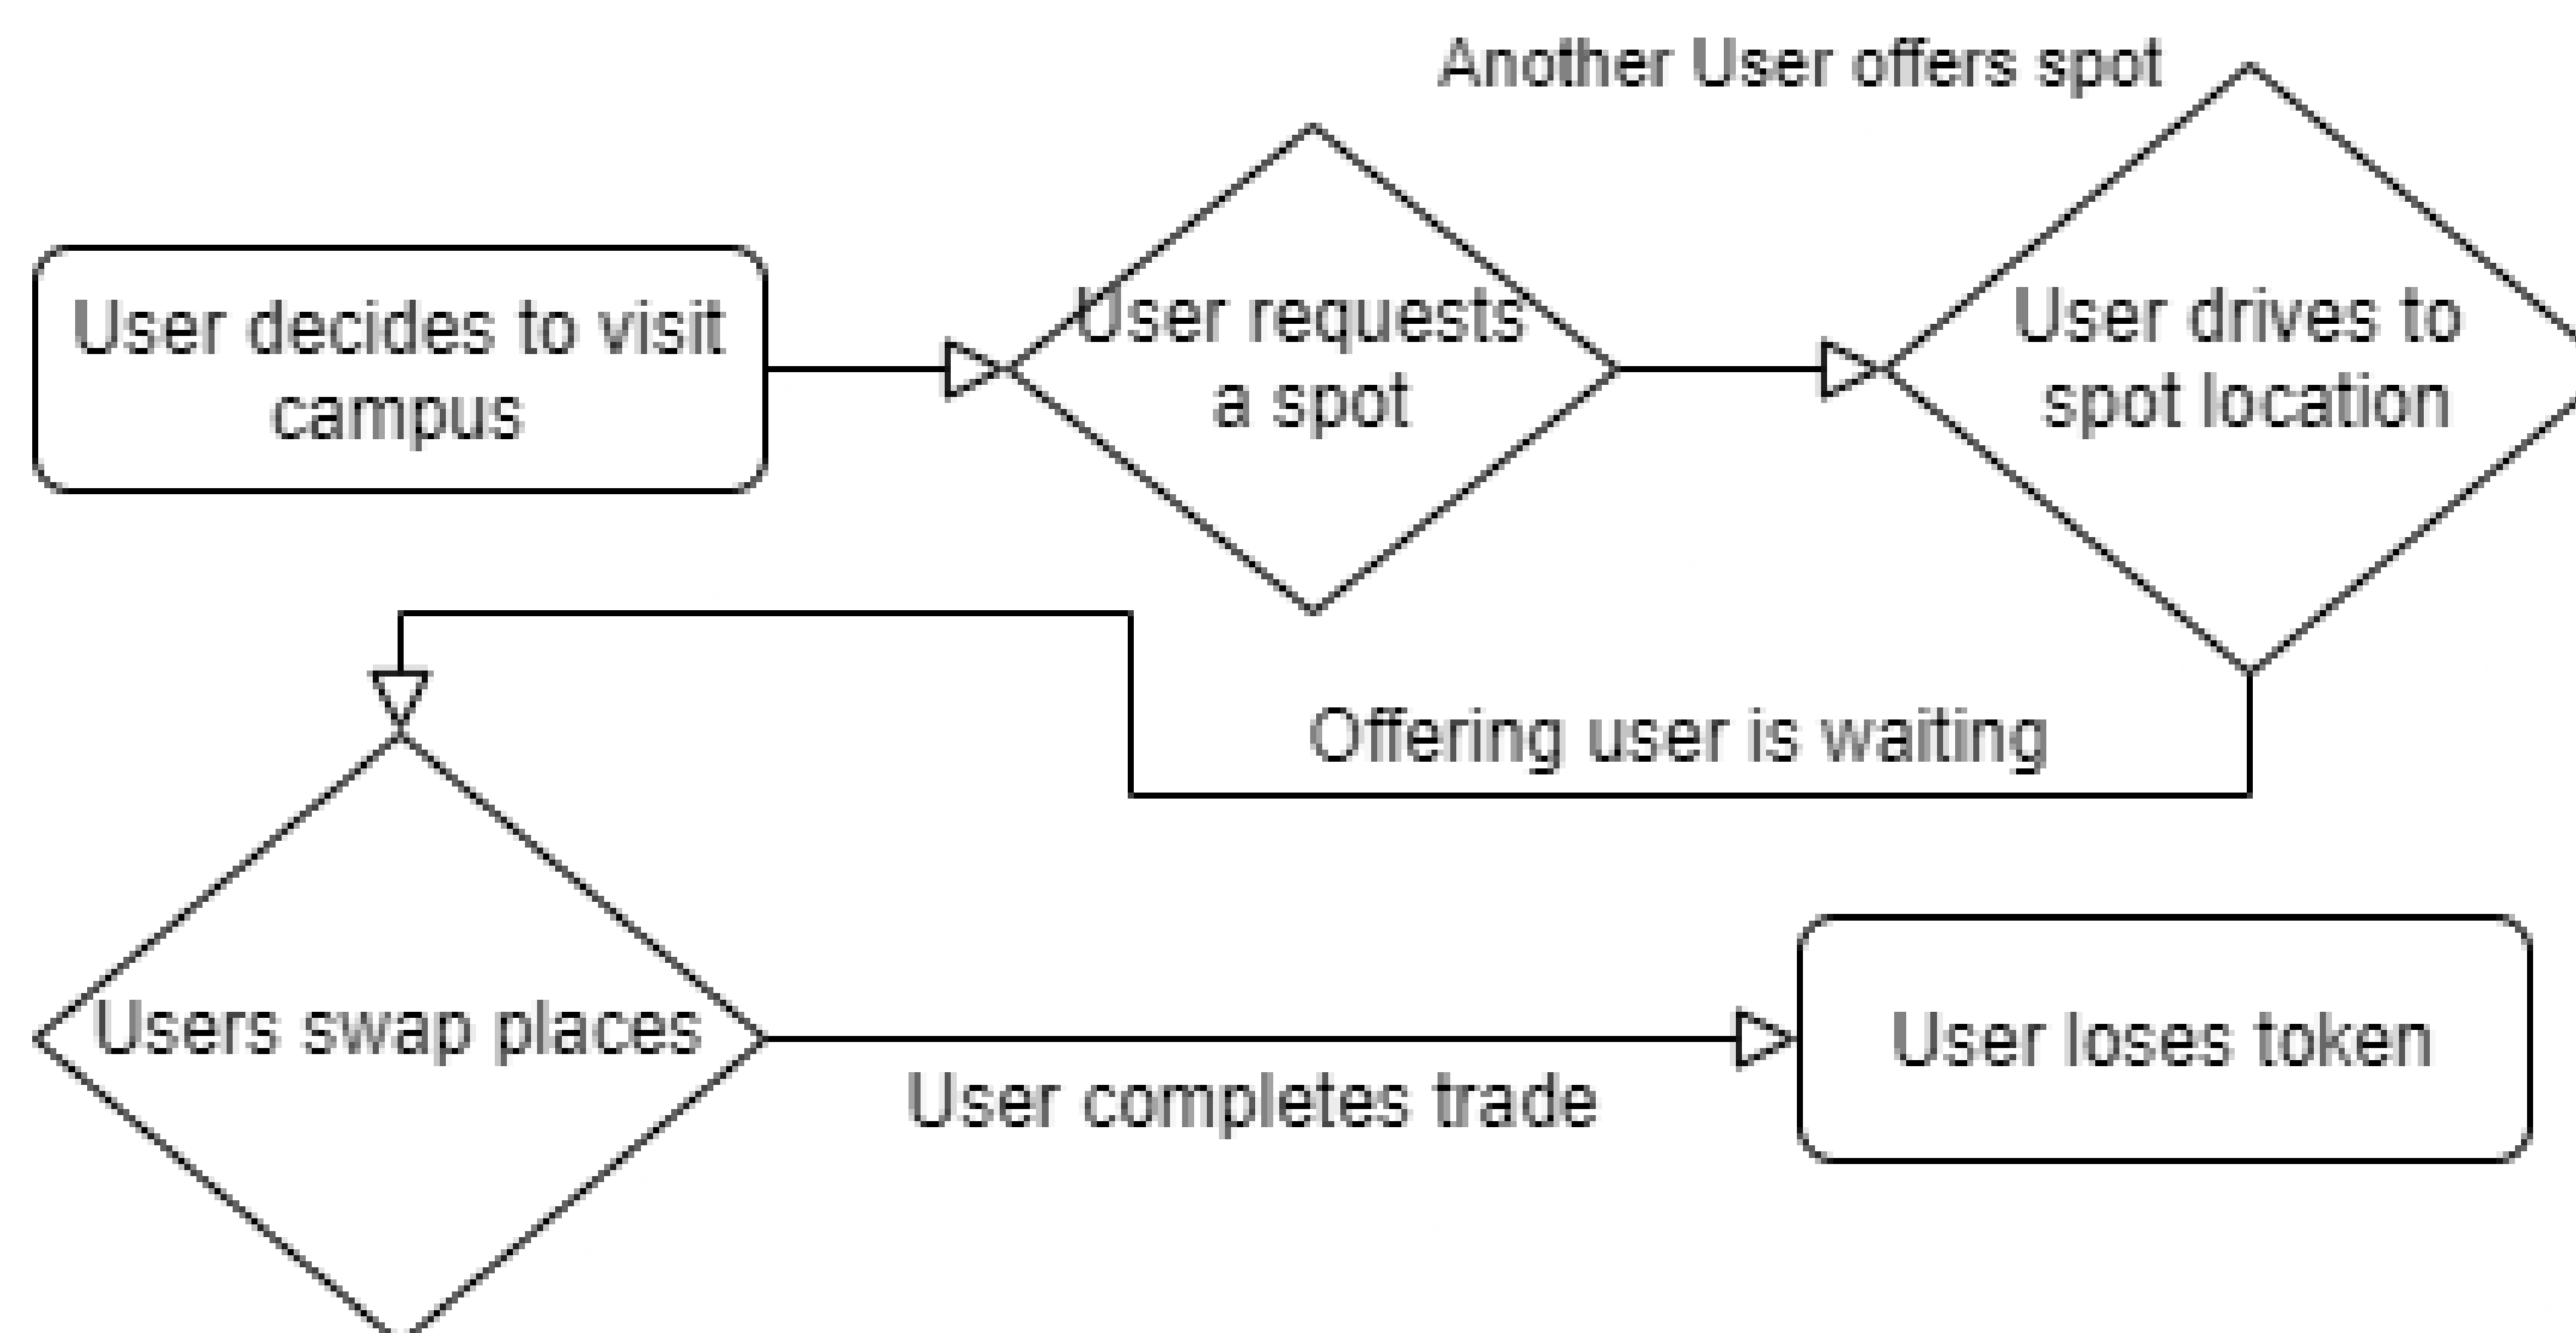

“No more chasing your tail, you just park!”

User flow chart (Requester)

Stack

Issues

- How will users find each other
- What stops people from just cancelling/gaming the system
- Can this be monetized/Can you make money with this

Answers

- Users car info is saved by the database to help find each other
- There is a map for users to use
- Ratings and tokens help inhibit malicious use
- Tokens could be sold in a for profit model
