

CMPS 2680 Lab 3

Spring 2025

Part 1 - Setup

1. For this assignment you will have multiple files, so I would highly recommend creating a lab3 folder.
2. Inside of the lab3 folder you will create three html files: **home.html**, **services.html**, and **contact.html**.
3. All three files will have this same structure:

```
<!doctype html>
<html>
  <head>
    <title> </title>
    <link rel='stylesheet' type='text/css' href='./style.css' >
  </head>
  <body>
    <header>
      <h1>Page Title</h1>
    </header>
    <nav> </nav>
    <div class='content'> </div>
    <footer> </footer>
  </body>
</html>
```

4. The section inside the nav tags will be the same for all three pages, and will contain an unordered list with local links to the three pages (**home.html**, **services.html**, and **contact.html**).
5. In the footer for all 3 pages: put the copyright symbol ©, the name of your “Company” and the year
6. Since we know that the nav section and footer will be the same, I would recommend completing those sections in your **home.html** then copying the code to the other two files.

Part 2 - “Advertisement” Website

In each file, you will have different content inside the **<div>** section with the class ‘content’

home.html

1. The title and header of this page will be the name of your “Company”
2. Create a page with at least 2-3 SHORT paragraphs, each inside of its own set of paragraph tags describing your business to your customers.
3. If you are having trouble coming up with an idea, use a hobby you enjoy. It could be piano lessons, gardening service, dog grooming... it doesn't matter. Have fun with it.

services.html

1. The title and header of this page will be “Services”
2. You will present at least three products or services in the following format:
 - a. An **<h2>** section with the service name and cost
 - b. An **** tag with the class “thumbnail” that points to a LOCALLY saved image
3. If you are having trouble finding images you can try using a site like <https://pngimg.com/>.

contact.html

1. The title and header of this page will be “Contact Us”
2. Provide the following information, each on it's own line:
Company Name, Address, Phone Number, and Hours of Operation
(This information can be made up of course)
3. Try to experiment with **<div>**, **<p>**, and **
** tags to space things out nicely

Part 3 - Adding Style

In the same lab3 folder, you will also create a file called **style.css** and use CSS rules to complete the following:

1. Style the body's background as a color or an image
2. Style h1 to have center text alignment
3. Style the navigation's list style type to your choosing
4. Style the color for each state of an anchor (link,visited,hover,active)
5. Create a class called 'content' and declare the font family, font size, and font color
6. Style the footer's background color or image and font size to be smaller than the content's font size
7. Create an class called thumbnail and declare height to be 150px and width to be 200px
(this should change the image dimensions on your services page)
8. Declare 5 more css rules of your choosing. You are welcome to add more content, divs, lists, images, etc.
