

CMPS 2680 Lab 7

Spring 2025

Part 1 - Setup

1. For this assignment you will have multiple files, so I would highly recommend creating a lab7 folder.
2. Inside of the lab7 folder you will run the following commands:

```
touch lab7.html script.js style.css
```

This will create all three files you will need for this lab with one command.

Part 2 - Find Multiples

lab7.html:

1. Make sure to source your script.js and style.css files.
2. In the body, you will have a container div with two main elements inside of it:
 - An `<input>` element with the id `'userInput'`
 - A `<div>` element with the id `'multiples'`
 - You may also want to include some headers to label each element.

script.js:

1. Use `getElementById` and `addEventListener` to add a `"keyup"` event to the `'userInput'` element.
This event will call the `generateMultiples` function you will define later.
2. Define a function called `generateMultiples()` that will do the following (in this order):
 - a. IF `this.value` is blank OR `this.value` is not a number:
 - Update the `innerHTML` of the `'multiples'` element with an error message
 - End the function early using a `return;` statement.
 - b. Pass `this.value` to the `parseInt` function, and assign the returned value to a variable called `base`
 - c. Create an array called `nums` with the values 1 through 12
 - d. Use a for loop to iterate through the `nums` array.
For each element in the array you will add the following to the `innerHTML` of the `'multiples'` div:
 - multiply `base` by `nums[i]` to get each multiple value
 - use string concatenation to place each multiple value inside of a paragraph element
 - IF `i` is even, make the class for the `<p>` element `a`
 - IF `i` is odd, make the class for the `<p>` element `b`

style.css:

1. Set the width of the container div and center it on the page.
2. Add a text shadow to the headers/labels
3. Apply some interesting style/color to the id `userInput`.
4. Apply a different style to `class a` and `class b` so that every other multiple stands out.
Even though they will have different styles, they should still be cohesive/complimentary.

Completed Example

Enter a number:

Multiples:

5

10

15

20

25

30

35

40

45

50

55

60

Enter a number:

Multiples:

ENTER A VALID NUMBER!
