CMPS 3390 Lab 6

Fall 2024

Part 1 - Setup

1. Once again, we will be using IntelliJ Idea Community for this lab.
    - You can download and install this from Jetbrains Website.
    - If you will be completing this lab on the class/lab computers, run this command from the machine's terminal to install the JetBrains ToolBox (NOT ON ODIN!):

    ```
    bash <(curl -s https://cs.csub.edu/~paul/cs3390/scripts/installJTB.sh)
    ```

    Then use the ToolBox to install IDEA Community

2. We will be starting with an app that I have prebuilt. To save us time I have uploaded my copy to github:
   https://github.com/wmpaulroyer/CMPS3390-LAB-06.git
   If you are unable to use git clone, you can also download the zip of the project and extract it:
   https://github.com/wmpaulroyer/CMPS3390-LAB-06/archive/refs/heads/main.zip

Part 2 - Guided Example: Calling An API and Parsing JSON

In class demonstration. Documentation will be added here later.
