

CMPS 3390 Lab 8

Fall 2024

Part 1 - Setup

1. Once again, we will be using IntelliJ Idea Community for this lab.
 - You can download and install this from JetBrains Website.
 - If you will be completing this lab on the class/lab computers, run this command from the machine's terminal to install the JetBrains ToolBox (NOT ON ODIN!):

```
bash <(curl -s https://cs.csub.edu/~paul/cs3390/scripts/installJTB.sh)
```

Then use the ToolBox to install IDEA Community

2. We will be starting with an app that I have prebuilt. To save us time I have uploaded my copy to github:
<https://github.com/wmpaulroyer/CMPS3390-LAB-08.git>
If you are unable to use git clone, you can also download the zip of the project and extract it:
<https://github.com/wmpaulroyer/CMPS3390-LAB-08/archive/refs/heads/main.zip>
3. Once you have the project open, make sure to update the username on line 49 of the **SearchController**.
4. If you don't have one already, create a 3390 folder inside your public_html folder **ON ODIN**.
5. INSIDE of your 3390 folder run the following commands:

```
wget https://cs.csub.edu/~paul/cs3390/labs/lab08.zip;  
unzip lab08.zip;  
rm lab08.zip
```

6. If you have done everything right you the full path to the API files should be:
~/public_html/3390/lab08
7. We will be editing the search.php file and adding a replace.php

Part 2 - Guided Example: Using html with API responses

In class demonstration. Documentation will be added here later.
