# CMPS 3680 Homework 5

# Spring 2024

### **PHP Functions**

• Built in functions: w3schools | php manual

• User-defined functions: w3schools | php manual

• Callback functions: w3schools | php manual

• Anonymous functions: <a href="php-manual">php manual</a>

• Arrow functions: <u>w3schools</u> | <u>php manual</u>

## A Note On Function Scope

php functions do not have access to variables created in the function's parent by default.

**For global variables:** use the 'global' keyword or the \$GLOBALS associative array inside the function.

**For everything else:** use an anonymous function with the "use" keyword, or an arrow function.

# **Useful Functions for Processing/Analyzing Data**

- <u>file get contents</u> | <u>file put contents</u>
- <u>ison decode</u> | <u>ison encode</u>
- array filter | array map | array reduce

### **PHP Classes**

- Standard predefined classes
- User-defined classes: <u>w3schools</u> | <u>php manual</u>
- Inheritance: <u>w3schools</u> | <u>php manual</u>
- Abstract classes: <u>w3schools</u> | <u>php manual</u>
- Interfaces: <u>w3schools</u> | <u>php manual</u>

### **PHP Extensions**

- Full list of extensions
- To see which extensions are installed on your server:

php	-m
